

IVAN DEINICHENKO

Senior Frontend Engineer — Vue / Nuxt / SSR / TypeScript · Frontend Architecture

Serbia · Fully Remote · B2B · [Phone](#) · [LinkedIn](#) · [Email](#) · [Website](#)

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 13+ years building, modernizing, and optimizing large-scale, product-driven web applications. Specializes in turning legacy or messy codebases into clean, fast Vue/Nuxt + TypeScript SSR architectures with measurable gains in performance, Core Web Vitals, and SEO. Has owned frontend architecture end-to-end, led and hired engineers, and delivered across products ranging from high-traffic enterprise sites (tens of localizations) to consumer platforms operating at social-network scale. Works autonomously, sets standards, and ships.

CORE SKILLS

- **Frontend:** Vue 2/3, Nuxt 2/3/4, JavaScript (ES6+), TypeScript, Composition API, Pinia, Vue Router, VueUse
- **Architecture & SSR:** SPA, SSR, SSG, custom SSR, Feature-Sliced Design (FSD), Atomic Design, design systems, component libraries, Storybook
- **UI & Styling:** Tailwind CSS, SCSS/LESS, Quasar, Naive UI, Nuxt UI, Vuetify 2/3, Swiper, TipTap
- **Performance & SEO:** Core Web Vitals (LCP, CLS, FCP), Lighthouse, SSR SEO, structured data (JSON-LD / schema.org)
- **APIs & Real-time:** REST, WebSockets, Pub/Sub, JWT auth, Firebase, A/B testing & third-party integrations
- **Tooling & Infra:** Vite, Webpack, Git, GitHub Actions, CI/CD, Docker, Cloudflare, AWS/GCP, npm
- **Quality:** Testing (Jest/Vitest, Cypress/Playwright, Testing Library), code review, legacy modernization, Agile/Scrum, mentorship
- **AI-assisted development:** Claude Code, GitHub Copilot, Cursor, Codex CLI (incl. AI-driven code review)

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer — Confidential Holding (NDA) · Multi-tenant E-commerce / Corporate Portal

B2B Contract · Mar 2026 – Present · Remote

- Migrating a large multi-tenant Vue 3 corporate-portal platform — a single shared codebase distributed to multiple companies within the holding, with per-tenant configs and theming — from Quasar UI to Naive UI.
- Refactoring pages to Feature-Sliced Design (FSD), improving structure, reusability, and long-term maintainability across the shared codebase.
- Work spans the platform's e-commerce and content-management areas, including an in-portal admin with an ACL role system (admins, shop and content managers) behind auth guards.
- Run thorough per-page code review (manual + AI-assisted) and self-review before delivery to keep quality consistently high.
- **Stack:** Vue 3, TypeScript, Pinia, Vue Router, VueUse, Tailwind CSS, Quasar / Naive UI, TipTap, Vite, dayjs, radash.

Senior Frontend Engineer — MaxDuel · Gaming Platform

B2B Contract · Nov 2024 – Mar 2026 · Remote

- Took over a slow, buggy Vue 2 platform (Lighthouse ~20), stabilized and shipped it under burning deadlines, then led a full rewrite to Nuxt 4 + TypeScript + SSR.
- Owned the new architecture end-to-end: reverse-engineered requirements from an undocumented codebase, designed the architecture, built a Storybook component library, and ran a seamless cutover from the legacy app.
- Hired two senior engineers and led the distributed, international team (all collaboration in English).

- Built runtime automation (e.g. a docx parser for legal Terms & Conditions) that replaced a recurring half-day manual task with an always-current automated flow.
- **Results:** SEO score ~40 → 100; major Core Web Vitals gains (LCP, CLS) with ~3× Lighthouse Performance; ~2× faster feature delivery; strong mobile/tablet support.

Senior Frontend Engineer — Acronis · Cybersecurity Product Company

Nov 2022 – Oct 2024 · Remote

- Worked on acronis.com — an enterprise platform (shop, blog, knowledge base; tens of languages; multi-thousand DAU) on Vue 3 + custom SSR with an in-house CMS.
- Solo-designed and built a structured-data (JSON-LD / schema.org) module for the SEO team: TypeScript SchemaHandler classes rendered on SSR, fully configurable via the CMS — global defaults, page groups, and per-URL overrides across many schema types.
- Led Drupal → Vue 3 migration of 5+ global site sections, rebuilt 1:1 with full test coverage and no regressions.
- Integrated VWO A/B testing and enabled marketing to run experiments self-serve, freeing engineering time; built the Resource Center and TRU blog from scratch; contributed to the in-house UI library + Storybook.
- **Results:** SEO index ~70 → 95+; won an internal 100-day tech-debt challenge (100+ TODOs closed — top by a wide margin).

Senior Frontend Engineer — Noveo (Carlili) · French Car-Rental Platform

Feb 2022 – Nov 2022 · Remote

- Lead frontend on Carlili (carlili.fr), a French car-rental platform on Nuxt 2 + SSR (EN/FR); inherited a weak codebase and rebuilt its architecture.
- Restructured the entire frontend to Atomic Design (refactoring 200+ components) and migrated styling to Tailwind CSS, improving development speed (~1.5×) and developer experience.
- Rewrote broken JWT authentication (dropped sessions, faulty token expiry/refresh) cleanly to best practices.
- Delivered major Core Web Vitals / Lighthouse improvements (asset compression, Cloudflare caching, code-splitting, lazy-loading, removing render-blockers) and made the product production-ready; also fixed Noveo's internal Vue 3 UI component library.

Earlier Experience — Fotostrana & AST 222

Fotostrana (2017–2022) — top-3/4 Russian social network (millions of DAU). Frontend / lead roles across the games and R&D departments; began building with Vue 2 (~2019). Ran a live game solo for a year, end-to-end (code, economy, content, KPIs); informal lead of a 5-developer team; shipped 10+ web and mobile titles, with projects averaging ~800k–1M RUB/month in revenue.

AST 222 (2012–2017, first role) — HTML5 game studio for major social networks. Grew to full-stack, then team lead (~10–15 people) for ~3 years. Introduced version control, CI, Ansible-based auto-deployment, and Agile from scratch; built a boilerplate framework that cut project setup and deployment from weeks to minutes; shipped 40+ projects.

SIDE PROJECTS

- **Hue: Color-recognition app** — React Native (iOS + Android), shipped; helps interior designers and colorblind users identify and compare colors.
- **Coupon web app** — personal Next.js + TypeScript project (in active development).

EDUCATION

MSc, Information Systems & Technologies — Petrozavodsk State University (2006–2012)
